AROMATIC 150

ArroChem's Aromatic 150 is a type of aromatic hydrocarbon solvent, specifically in the C10-C13 carbon range. It is a colorless to pale yellow liquid with a characteristic aromatic odor. Aromatic 150 is widely used in various industrial applications, including agricultural, paint and coatings, adhesives, rubber processing, and chemical synthesis.

General Characteristics:

Appearance:	Colorless to pale yellow liquid
Chemical Composition:	Aromatic hydrocarbons
Solubility in Water, 25°C:	Insoluble; soluble with most organic solvents.
Flash Point:	≥62°C
Specific Gravity:	.89-.91 g/cm ³

APPLICATION:

Aromatic 150 finds various applications across industries due to its solvency and compatibility with a wide range of materials. Key applications include:

- **Paint and Coatings:** Used as a solvent in paints, varnishes, enamels, and coatings to improve viscosity and flow characteristics.
- **Adhesives and Sealants:** Included in adhesive and sealant formulations to enhance bonding and improve tack.
- **Rubber and Polymer Processing:** Used as a process oil in rubber compounding and polymer manufacturing.
- **Chemical Synthesis:** Utilized as a reaction medium or solvent in chemical synthesis and industrial processes.
