GLYCOL ETHER DPM ACETATE

ArroChem's Glycol Ether DPM Acetate, also known as Dipropylene Glycol Methyl Ether Acetate, is a high-performance organic solvent. It is derived from the reaction of Dipropylene Glycol Monomethyl Ether (Glycol Ether DPM) with Acetic Acid. Glycol Ether DPM Acetate is a clear, colorless liquid with a mild, fruity odor. Due to its excellent solvency with a wide range of resin types, it is widely used in various industrial applications, including paints, coatings, inks, adhesives, and chemical processing.

General Characteristics:

Appearance:	Clear and free of suspended matter
Solubility in Water, 25°C:	Partially soluble
Specific Gravity:	~0.957 g/cm ³ at 20°C (68°F)
Ionic Nature:	Non-ionic

APPLICATION:

Glycol Ether DPM Acetate finds diverse applications across different industries, including but not limited to the following:

- **Paints and Coatings:** Used as a coalescent in water-based paints and coatings to improve film formation and stability.
- **Inks:** Employed as a solvent in printing inks, providing excellent solvency for pigments and resins.
- **Adhesives:** Found in adhesive formulations to improve flow and bonding properties.
- **Chemical Processing:** Acts as a reaction medium and solvent in various chemical processes.
- **Industrial Cleaning Agents:** Used in cleaning products for its solvency power.
